

Which one doesn't belong?

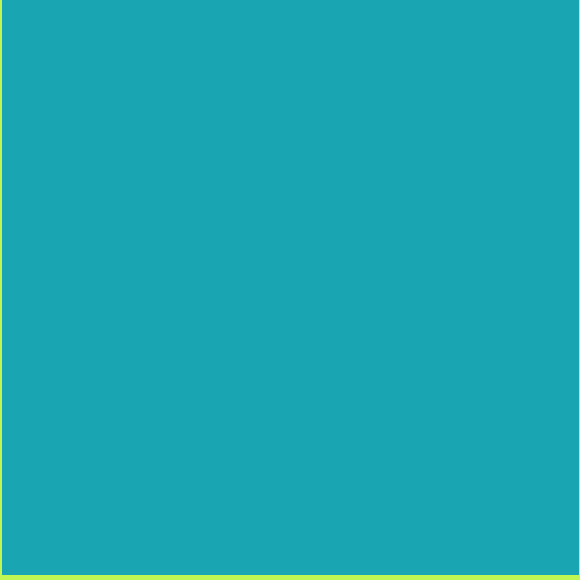

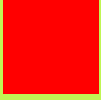

A shapes book

There is no answer key for this book.

I made this book to spark conversations and thinking.

Every shape is a right answer.

Most pages have a shape that a young child can say doesn't belong and why. Many pages also have one or more shapes that will be challenging for older people.

I hope this is a book you will leave open, think about, and return to.

I hope you will share it with the youngest little ones in your life, and with the adults you know whose minds remain curious and inventive.

I hope you will send me your own sets of shapes.

Find me at **talkingmathwithyourkids.com**.
